FANUC is the leading global manufacturer of factory automation, with more than 60 years experience in the development of computer numerical control equipment. It has 4 million CNC controls and 20,000 laser systems installed worldwide and satisfied customers in every corner of the globe.

Highest quality – shortest processing time

With more than 60 years’ experience FANUC offers the widest range of CNC systems in the industry from best value controls with powerful functionality, to high-performance control systems for complex machines – all with fast programming and ease of use, guaranteeing the highest quality and short processing times.

That’s how we increase your productivity.

Your advantages:

- 100% FANUC quality
- more than 60 years of experience
- wide range of displays and panels
- stand-alone CNCs
- LCD mounted CNCs
- highest flexibility for your solutions
Unique flexibility

Only FANUC offers you CNC controls in two general versions: LCD mounted as compact solution with less space consumption and less hardware or as highly flexible stand-alone solution. Your benefit: full flexibility for your machine design.

Versatile field bus systems

- FANUC I/O Link
- PROFINET IO
- EtherNet/IP
- FL-net
- PROFIBUS DP
- Modbus TCP
- DeviceNet
- CC-Link
- AS-i
- EtherCAT and POWERLINK (only Digital Servo Adapter - B)

Your advantages:

- perfect matching components
- all with 100% FANUC quality
- highest reliability for all parts
- high compatibility up and downwards for long time planning reliability
- one strong partner for all components

Flexible package solutions

FANUC offers all major components for your CNC controlled machine: CNC controls, motors and amplifiers in a tailor made and easy to install package for your specific needs. All components are developed and manufactured in-house. The results are superior functional reliability and the highest levels of machine availability – with a mean time between failure of well over fifty years*, contributing to extremely low cost of ownership.

*for 0
High-performance CNC for complex machine tools

CNC Series 30i/31i/32i-MODEL B
The FANUC Series 30i/31i/32i-MODEL B controls are ideal for highly complex machines with multiple axes, multi-path, and high-speed high-precision machining requirements. The hardware and innovative software provide the highest performance, precision and surface quality.

Key features:
• up to 96 axes, 24 spindle axes and 15 paths
• 5-axis machining
• compound mill/turp or turn/mill machining
• extended integrated preventive maintenance functions
• integrated FANUC Dual Check Safety function
• shop-floor programming via MANUAL GUIDE
• collision control via 3D Interference Check
• dynamic compensation functions for highest accuracy
• High-Speed Smooth Tool Center Point 5-Axis Compensation
• Learning Control/High-Speed-Cycle-Machining
• integrated high-speed PMC
• high-speed cutting
• HMI offering intuitive and extremely user friendly operation

Applications:
• milling
• turning
• grinding
• punching
• laser
• gear cutting

Applications:
• milling
• turning
• grinding
• punching
• gear cutting

Basic model for multiple control applications

CNC Series 0i-MODEL F Plus
The CNC Series 0i-MODEL F Plus provides the ideal basic solution for multiple control applications. Ready to use, it boasts latest generation hardware and a complete package of standard software. To maximise productivity on more specific applications, it can be easily customised using a range of additional functions. Combining unbeatable value for money with unrivalled performance and reliability, it includes features and functions usually associated with high performance systems.

Key features:
• up to 12 axes, 6 spindle axes and 2 paths
• up to 2 additional loader paths
• 6-axis simultaneous and 3+2-axis machining
• ready to use with integrated software package
• excellent performance-to-cost ratio
• integrated FANUC Dual Check Safety function
• shop-floor programming via MANUAL GUIDE or TURN MATE
• functions for simple customisation included
• integrated high-speed PMC
• high speed and high quality machining package
• maximum look-ahead blocks 600
• common operability, maintainability, network and PMC function with CNC Series 30i-MODEL B
• HMI offering intuitive and extremely user friendly operation

Applications:
• milling
• turning
• grinding
• punching
• gear cutting

CNC designed for transfer lines

CNC Series 35i-MODEL B
The FANUC series 35i-MODEL B control is primarily designed for transfer lines, gantries or multiple milling and drilling stations. Its software options enable high-precision multi-path processing with short processing times.

Key features:
• up to 20 axis, 4 spindle axis and 4 path
• ready to use with integrated software package
• simple axis setup
• additional functions for simple customisation
• up to 5 integrated high speed PMCs
• integrated FANUC Dual Check Safety function

Applications:
• transfer lines
• gantries
• multiple milling/drilling stations

Applications:
• packing
• handling
• wrapping
• sawing
• pressing
• punching
• bending
• spinning
• friction welding

CNC for motion control and various applications

Power Motion i-MODEL A
The FANUC CNC Power Motion i-A is ideal for efficient motion control and a wide range of various applications from positioning up to multi-path axis interpolation.

*All panels and screens shown are examples only.*
Configure your CNC

Each FANUC CNC series offers a diverse range of panels and screen solutions. Your benefit: a wide variety of configuration options for every specific machining solution providing full flexibility for your ideas.

Choose the Manual Data Input (MDI) device of your CNC control from a selection of a small size MDI, a standard size MDI, a 68-key MDI or a full keyboard with either English or symbolic key sheets for a variety of applications. Depending on the type, the device has alphanumeric keys to input part programs, operation keys like RESET, PAGE UP, PAGE DOWN, HELP and menu keys to switch between several menu screens.

The new Machine Operation Panel (MOP) comes with additional and improved safety options. All the buttons on this control panel are equipped with double wired keys and further safety functions like override switches. An integral ESP button enhances safely in case of emergency. Via the FANUC I/O Link 1, the operator panel communicates with the CNC system and is thus easily integrated into the FANUC Dual Check Safety system. Like its forerunner, the innovative Safety MOP has exchangeable key tops which allow a customized key layout.

FANUC iHMI has been designed to be extremely easy to use. Intuitive menu icons, high-visibility design and animated features take the head-scratching out of complex machining operations, making accessing even the most sophisticated programs and functionalities straightforward. Despite its more intuitive layout, users will nevertheless find that it provides a familiar FANUC user experience.

CNC operation screen

Simple
Easy operation along process flow with integration of three screens:

Friendly
Help troubleshooting – one-stop problem-solving

Graphical
Intuitive icons and high-visibility design with animated features

Various cycles
- turning
- milling
- measurement

Safety function DCS
The certified FANUC Dual Check Safety (DCS) function provides a high level of safety for the operator during operations with protection activated while power is still applied. In case of an abnormal function FANUC DCS quickly shuts off power to protect the operator allowing a quick restart of the machine tool operation. Special functions are available to simplify the creation of the machine documentation, e.g. Test Mode Function for Dual Check Safety.

Your benefits:
- reliable operator safety
- fewer external safety circuits required
- overall cost reduction of the safety solution
- certified to comply to the actual safety standards
Tool Manager: Uniform tool information management for machine
- up to 1000 tools with tool management option
- up to 1024 sets of tools with tool life management option
- up to 1000 tools when the CNC option is invalid
- tool catalogue data available for about 2000 tools
- VERICUT format (TLS file) CAM/simulation software is compatible with tool data

Data logger: Investigate cause of problem while machining
- amount of data per second under 64 KB
- position of axes
- CNC status
- PMC data
- macro variable data
- information of servo/spindle
- operational information
- alarm information etc.

Manual viewer: Always refer to the machine’s manual
- add MTB’s manuals and classify into an arbitrary group
- use multiform file formats (HTML, TXT, PDF)
- display manuals according to NC language setting
- memory capacity for manuals is limited to 500MB

Machine collision avoidance: Model, prevent interference and add to CNC before machining
- collision status can be confirmed graphically
- forecast positions for safe, precise collision detection
- based on CGTech Co’s CAS [Collision Avoidance Software]
- maximum forecast time up to 600 msec.
- create 3D models of the machine on a PC

Servo viewer: Measure and display various kinds of data
- servo and spindle data, e.g. position, speed and torque
- PMC data
- CNC status information, e.g. program number, M/S/T codes
- analyze the axis movement and CNC operation timing
- optimize the CNC program to reduce cycle times
- monitor the machine’s condition by periodical measurements

Maintenance manager: Observe CNC and machine parts and set alert for exchange time
- specified by usage time, amount of movement, PMC counter etc.
- add a max. of 100 items as orig. monitoring item
- min. 1 sec monitoring period
- time savings of an hour or more
- easy to add original monitoring item and notification information
**OPC SERVER**

OPC is a communication standard for industrial automation. The FANUC OPC Server is a Windows® application software for PCs that converts the communication protocol between OPC and FOCAS. Devices with an OPC client functionality can communicate with FANUC CNCs via this software.

**Benefit**
- Connect to a third party application software that has OPC client functionality easily

**Details**
- Supports OPC-UA standard
- Supports OPC-DA standard 3.0, 2.0 and 1.0a
- Read and write PMC data
- One PC can communicate with up to 100 CNCs
- CNC can communicate with a PC via Embedded Ethernet or Fast Ethernet

**FANUC LADDER-III**

FANUC LADDER-III is the standard programming system for creating, displaying, editing, printing, monitoring, and debugging ladder sequence programs for CNC PMC ladder. It works with CNC GUIDE on one or multiple PCs and is easy to connect to the CNC via Ethernet.

**MACRO EXECUTOR AND C-LANGUAGE EXECUTOR**

Your powerful programming language for machining or machine management purpose: The Macro Executor function converts, loads and executes all Custom Macro programs that you create as executable macro programs that can be called from a standard part program. Using the C-Language Executor functionality as powerful programming language for machining or machine management purpose enables you to develop functions and programs adding new functionality to your CNC, as well as machine control functions written in C and modify Macro Programs to follow machine and production evolution. Up to two independent real-time tasks are also available to implement time critical functionalities.

**CNC GUIDE FOR TRAINING AND DEVELOPMENT**

Cut your training costs. CNC GUIDE provides a realistic operation, and part programming environment at a fraction of the cost using a production machine tool. Operators perform exercises learning conventional G-code programming, including canned cycles and custom macros and FANUC MANUAL GUIDE I. Create a superior software development environment for your FANUC CNCs! CNC GUIDE adds the PMC ladder, support for the standard FANUC operator panel with customizable key top. CNC GUIDE offers a valuable aid in the development of FANUC LADDER III, FANUC PICTURE, C-Language Executor and MACRO EXECUTOR applications.

**FOCAS LIBRARY**

FOCAS (FANUC Open CNC API Specification) is the protocol used to interact with your FANUC CNC from an external PC. The FOCAS library provides all required functions to develop Windows® applications which can communicate with a FANUC CNC via Ethernet or HSSB (fiber optics). Your benefits: Creation of customised functions and applications under Windows®, modification of Macro Programs to follow machine and production evolution, and easy access to many resources of the FANUC CNC to create advanced applications.

**BUILT-IN 3D INTERFERENCE CHECK SETTING TOOL**

This Windows® application allows the setting of the Series 30i/31i Built-In 3D Interference Check functions through a PC – including creation, setting and display of the 3D objects and figures representing the work piece, the fixtures and the tools, object moving and axis settings, real-time 3D interference check monitoring related to the Built-In 3D Interference Check Function.

**Benefit**
- A simplified management of the 3D Interference Check Project, easy import of 3D shapes to accelerate the setup, increased efficiency in managing multiple machine settings and large projects – and a simplified start-up through online functions.

**FANUC PICTURE**

FANUC Picture offers an easy way to create customised operator and HMI screens for complex processes and all the functions and features of modern HMI software tools. It supports objects, animations, data, and multi-language and features a macro language to run routines to perform tasks. The screens are compiled and stored in the CNC Flash-ROM (ROM) memory or on iHMI. Custom functions written in C/C++ can be called from FANUC Picture. Your benefits: simplification of operator work, less operation error, easier machine and process control and an improved overall productivity.

**SERVO VIEWER**

SERVO Viewer is a Windows® application software that enables to measure and display various kinds of data from a machine tool with a FANUC CNC. It is possible to acquire and view servo/spindle data such as position, speed and torque, PMC signals, or CNC status information such as program number, sequence number or M/S/T codes.

**Benefit**
- Analyze the axis movement and CNC operation timing
- Optimize the CNC program to reduce cycle times
- Monitor the machine’s condition by periodic measurements
Original FANUC Smart Software Tools

**Optimisation Tool**

**CNC User Interface for PC**

**User Tool**

**FANUC SERVO GUIDE**

FANUC SERVO GUIDE is a Windows® application for quick and easy optimization of servo and spindle axes. This software provides the integrated environment to test programs, set parameters and data measurement, needed for servo and spindle tuning. Direct connection between PC and CNC is possible through Ethernet.

**SCREEN DISPLAY FUNCTION**

Our best tool for CNC maintenance and setup on Open CNC systems. Simplify the access to the CNC screen from a PC and create an efficient remote maintenance tool. The Windows® application provides a straightforward solution to display CNC original and custom screens on PC, which is connected by HSSB or Ethernet. SDF does not need to be updated at CNC function or customisation change.

**PROGRAM TRANSFER TOOL**

Using this Windows® application enables you to manage part programs, tool offsets, custom Macro value, work piece origin offset, and tool management with easy connection between the CNC memory or data server and a PC by Ethernet.

---

**Shop Floor Programming Tools**

**TURN MATE i**

Increase the productivity and flexibility of your turning machines using FANUC TURN MATE i by simplified parts programming! The conversational software function assists the operation of entry-level turning machines – no knowledge of G code ISO language is required to program work pieces, and operation is easy with clearly laid out screens.

**MANUAL GUIDE i**

Create your part programs from a drawing to a production part in just a few steps! MANUAL GUIDE i supports turning, milling and compound machining applications and can be used on simple machines as well as on very advanced machining processes. The software is built around the standard CNC ISO code format and provides an ergonomic Graphical User Interface (GUI) with user-friendly icons. All of the relevant information is displayed on a single CNC screen. Your benefits: assisted and conversational programming of machining cycles, easy programming of parts, easy simulation – and an overall higher productivity by reduction of the total time from drawing to cutting.
Our strength: Service and Support

Intensive application support and personal customer service are major aspects of the FANUC world – from the first step to the last. A very skilled and dedicated service team will help you to build and operate the most efficient machines. Always flexible, always fast, always near. The special FANUC Service packages improves the performance of your machines even further.

Wherever you need us: we are there

With the largest global network of local subsidiaries in all continents, we are always there to meet your needs. Fast and efficient – 24/7. So you always have a local contact that speaks your language.

FANUC Academy

We help you get the most potential out of your automation through optimising the skills of your employees. Certified FANUC instructors train them in our fully equipped professional training centres, or at your own premises, using standard training modules as well as customised training packages to meet your specific needs.

Let’s optimise your productivity.
