

# FIELD system

## FIELD system PMA-Monitor

### DESCRIPTION

FIELD system PMA-Monitor is a lightweight dashboard providing a clear overview on production progress and actual equipment statuses for all connected devices. Individual monitoring allows to see running status of devices, productivity and alarm history.

### KEY BENEFITS

- Actual production status is known
- Reaction in case of production loss could be carried out immediately
- Malfunctioning machines are immediately visible and repair could be organised
- Productivity can be analysed based on history data
- Production progress of any connected machine could be tracked

### KEY FEATURES

- Alarm history visualisation
- Production planning data
- Resultant graphs of productions amounts
- Export of data by CSV
