

# FIELD system

## FIELD system ZDT (Zero Down Time)

### DESCRIPTION

FIELD system ZDT is an application to reduce unexpected downtime of FANUC robots and CNCs by monitoring their condition.

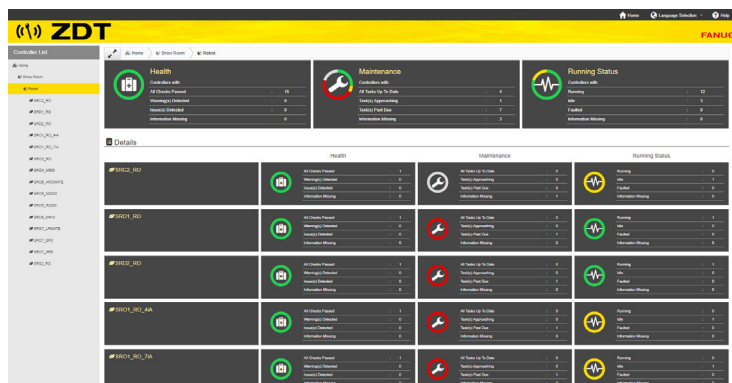

### KEY BENEFITS

- Reduction of unexpected downtime of FANUC robots and CNCs
- Reduction of maintenance costs and the workload of maintenance staff by improved planning and priority settings
- Reduction of spare parts stock by precise and advance diagnosis
- Improvement control of Spot Welding, Arc Welding and Vision process quality

### KEY FEATURES

- Abnormality monitoring, alarms, preventive maintenance and maintenance support
- Monitor abnormalities and changes from normal condition of equipment
- Obtain recommendation on alarm/maintenance from knowledge system
- Central management of maintenance statuses of production devices
- User notifications about periodical maintenance
